

INCIDENT API TESTING REPORT

Objective:

Verify API behavior for incident-related requests and error handling.

Test Case:

Access Non-Existing Incident

Endpoint:

GET /incident/{incident_id}/intel

Test Data:

incident_id = 9999

Expected Result:

API should return an error message indicating that the incident does not exist.

Actual Result:

API returned:

```
{  
  "message": "Incident not found"  
}
```

Status:

PASS

Conclusion:

The API correctly handled a request for a non-existing incident and returned a meaningful error message.

Evidence:

Screenshot showing GET /incident/9999/intel request and response "Incident not found".

The screenshot displays a REST client interface with the following sections:

- Method and URL:** GET /incident/{incident_id}/intel Incident Intel
